FAMILY TREE

Editorial

Hi Group

This week the Shaft finally accomplished it's patrol goal, i.e. to get to press before the Reply. Isn't that great? But all you Reply readers don't have to dispair we have been informed that the Reply will be out on the Forth of July with another fun filled, thrilling, interesting and overall wonderful issue.

That gives all the Shaft readers another good reason to spend the Forth of July in the rack as we do for all the other holidays we've spent at sea.

This week we're exposing a secret family tie on board Big Sam but the gory details are here within.

So read on and be good little boys, and remember the Southern Bell Loves you-all.

*Ad Infinitum Juki.
H. B. B.*

HAPPY FOURth
of August

I DO IT RIGHT THE FIRST TIME

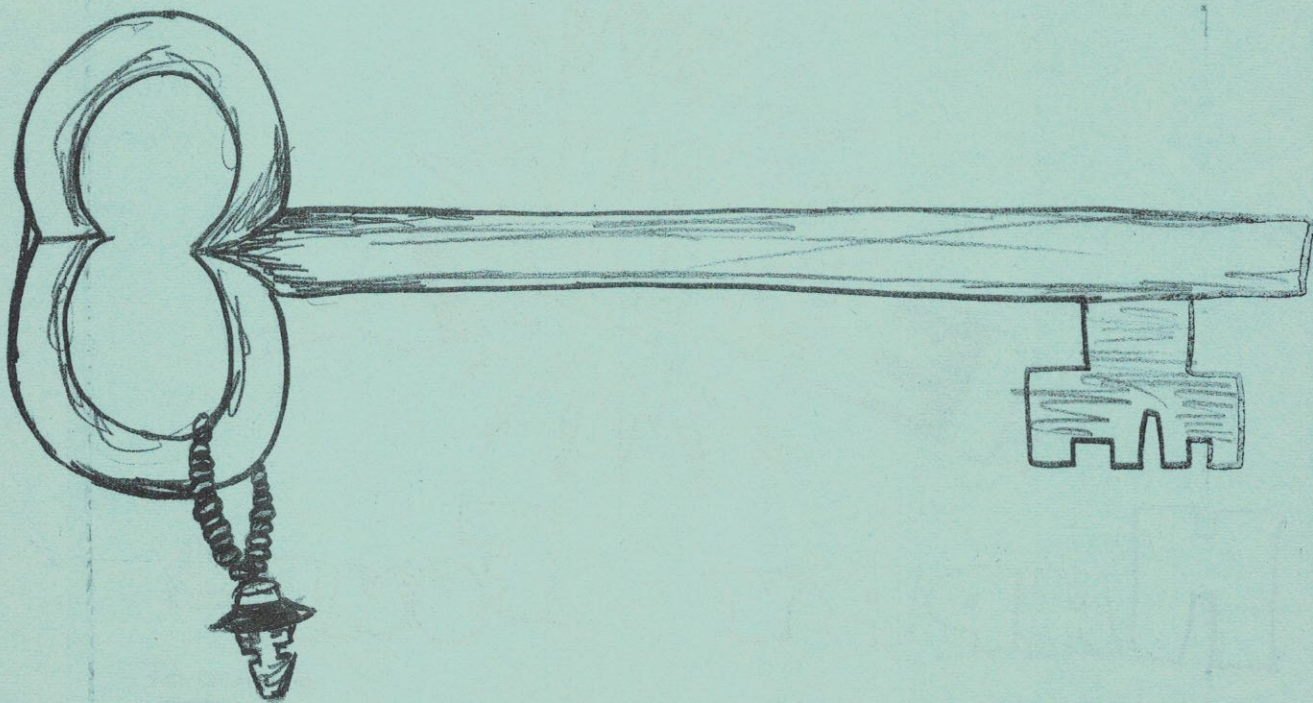

This week the coveted I do it Right the First Time award goes to none other than our own OBE, officially known as Stephen Oberhouse MM3(SS).

He has been selected for this award because of his expertise in starting O₂ Generators.

The other day he was experiencing a bit of difficulty while trying to start a generator. When he had exhausted all possible sources of trouble he finally called for help from his Sea Daddy Waldo.

Enter Waldo the true hero of the day. After about two seconds of deliberation Waldo walked to the generator and turned on the Key. He then pushed the start button and the generator magically came to life.

Nice going Obe, remember the key when you try to start your car.

"AN INPORT DRILL"

Participants: EOWW

Engineering Plant (EOWW's WIFE)

Scenario:

Submerged (under covers) on bedroom patrol, no contacts (yet), proceeding at Ahead Flank, all systems operational and intact.

COMEX: 9 Months ago

General Comments:

Considered very Varsity of the EOWW not to allow monitors present during all phases of the evolution.

Evolution was an uncontrolled, unauthorized impregnation of the plant with an energized, 92% enriched, non-poisoned core for purposes of immediate self gratification for superior engineering practices. There was a total disregard for the reproduction factor present for slow fission.

No tag out-all systems were energized and all fluid systems were not properly isolated resulting in an inadvertent discharge, discharge log was not filled out. A spill resulted and was not immediately covered, though the container was upright.

Erratic rod control was noticed-at times the operator didn't know whether to insert or withdraw to maintain criticality. He was apparently unaware of his exact rod worth. A dropped rod casualty looked imminent once but was recovered very nicely by the plants inherent reactions and interlocks.

Manual manipulation of tweaker knobs and buttons was noted throughout the spaces of the plant.

The EOWW lost full control of the plant shortly after reaching the point of adding heat and was observed to be oblivious to everything around him at the time the reactor went critical.

But, once again, inherent design and automatic features saved a disaster.

The EOWW was very expert at bringing the plant from Hot Standby to Hot Steaming, but very sloppily left the plant in COLD WET LAYUP.

Procedures were generally ~~observed~~ though many deviations and innovations were known to be occurring all over the plant. It should be noted that independent operator actions can result in scrambling of the plant or a cutback that could delay or cancel the whole mission, not to mention possible tube erosion.

Face to face communications were adequate, but rather informal (Several words and phrases not to be found in the IC manual were used frequently) with extensive hand motion and body gestures noted.

ENGINEERING STATUS REPORT:

It has been noted that Rollin, that mild mannered Chemist of AMR 2LL, has been up to some new tricks. Tired of his everyday chemistry he decided upon a new approach, this time he took on a quest to clean chemically the 2,000 gpd. While going about his job he noticed that the chemical involved was truly an acid indeed so without further ado he did some experiments.

First he placed a small amount on the stainless steel cover for the heat exchanger. He noted a reaction taking place. So being of solid character he lavishly covered it with chemicals and watched. Indeed he was transforming stainless to copper! What a miracle of modern science so he thought if this can be done instantly what can time do for the equation. So off he went and left it. He'll come back someday to see the results, but in the mean time he'll be on to bigger and better things.

THATA BOY SID_ YOU DUMMY!!!!!!!!!!!!

DEAR SHAFT,

In all the things TN MARTIN says he excels in, I found the most interesting to be his outstanding 140 GCT-ARI combination. But I am wondering about his self proclaimed 76 GCT. Isn't That unusually high???

IMPRESSED

DEAR IMPRESSED,

We all knew that TN MARTIN flings a line of shit but as is the case with most shit flingers-they don't know what they are talking about. We also feel that his Score of 76 on the GCT test is amazing since 75 is the maximum obtainable score anyone can get (legally) on the test no matter what he thinks he should get, or says he got.

What is better than that? Try asking our new mouth about his nineteen year old girlfriend who got her MASTERS DEGREE in two years after high school. The funny part is to watch his footwork when he knows he's been nailed.

XO QUALIFICATION BOARD

Boarder: XO (Southern Bell)

Boardee: NAV(Silver Fox)

PLACE: Stateroom # 2

XO: NAV, I have decided to conduct this board in my stateroom for two reasons.

NAV: What are they XO?

XO: #1, We will have more privacy and won't be bothered by anyone.
#2, I think sitting here in my stateroom will inspire you to try harder so you can have your own empire.

NAV: I sure do appreciate it XO.

XO: Well, let's get started!

NAV: OKAY XO, shoot!

XO: NAV, what is your opinion of the officer/enlisted relationship as it exists in submarines?

NAV: Much too lax. We should rule those subversive devils with an iron hand.

XO: Well, I can agree with you somewhat, but you must exercise restraint you know.

NAV: Just give me an opportunity and I'll show those dirty ----- a thing or two.

XO: How would you do that? At mast?

NAV: Hell NO! There won't be any masts on my boats.

XO: How do you intend to do it then?

NAV: Take them topside and shoot them!

XO: You can't do that!

NAV: Why not?

XO: Because it's against Navy regulations.

NAV: Damn commies must have written those too,

XO: How do you plan to run liberty on your boat?

NAV: There won't be any.

XO: That would cause severe morale problems. How would you handle that?

NAV: I would write an instruction demanding that morale improve at once.

XO: Now you're on the right track. Think paper work!

NAV: How do you remember all that stuff?

XO: You have to develop your mind to work like an iron trap - nothing in, nothing out!

NAV: Far from it.

XO: What about field days?

NAV: None of those either. I plan to make those scum bags clean up the ship 12 hours a day.

XO: Wrong again. You have to stop long enough to hold inspections otherwise there won't be any discrepancy list. (Remember the paper work!)

NAV: Right on!

XO: What would you do if we were tied up in a foreign port and a group tried to board the ship.

NAV: Send Crepeau and the Brown brothers up to shoot them with machine guns.

XO: Why not use fire hoses?

NAV: I don't know how to pressurize the trim system and the Browns don't know how to work the fire hoses.

XO: What about ship's qualification?

NAV: I don't plan to have a qual program. A new man reporting on board will automatically receive his dolphins.

XO: Why?

NAV: It looks better on paper to the squadron when were 100% qualified.

XO: What about drills?

NAV: I plan to hold drills during the 12 hours that clean up is secured.

XO: Don't you think you'll get tired of supervising all these things?

NAV: Supervise HELL!! I plan to sleep alot.

XO: Who will observe the drills?

NAV: The rest of the wardroom.

XO: What about their training?

NAV: Officers don't need training. They are born leaders.

XO: Boy, are you ever far out! (somewhere in left field)

NAV: How do you plan to handle the actual casualties?

NAV: Abandon ship.

XO: But officers aren't supposed to do that!

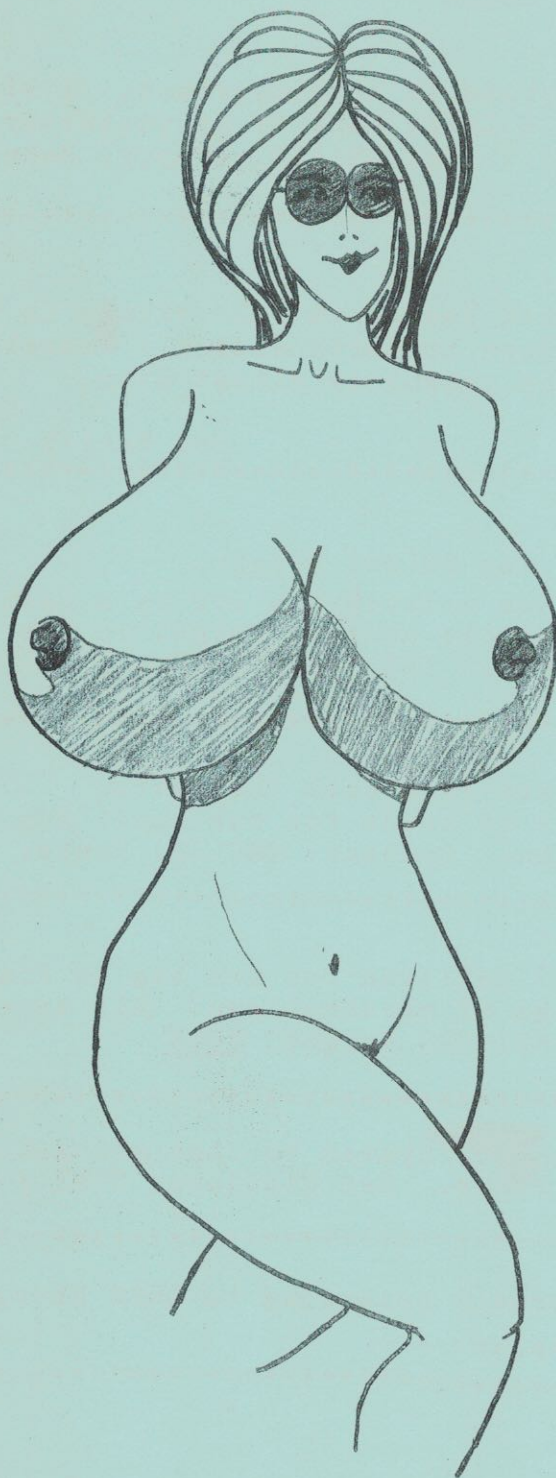

NAV: Who says? Only the Captain has to go down with the ship and with him out the way I can be a captain sooner.

XO: Why are you so interested in being a CO?

NAV: Nobody wants to go through life being second best all the time.

XO: Well, NAV with a little polishing on certain points I guess you are ready for the job.

XO: I wish you luck, you are sure going to need it.

SHAFT
SWEETHOG

PERVERTS PAGE

SHAFT SWAP SHEET

Wanted: One stop watch, price is not important, I will have to pay with a large hunk of my posterior rump if I don't find it. See QM1(SS) (Pappy) Hahn.

+++++

Wanted: More Masochist that desire to fall victim to the knife of a real down to earth sadist. Remember see me soon as the patrol is almost over.

Doc Menick

Wanted: A new Sea Daddy for SN(SU) Wright.
RM1(SS) Adamson has written him off as a lost cause All interested parties contact Wright in his place of employment. THE TRASH ROOM.

For Sale: One small Chicken Farm near Charleston.
Will sell cheap or trade for one small Hog Farm near Groton. Contact QMC(SS) Santee

+++++

Trade: Will trade MT2(SS) Sullivan for one bag of Kitty Litter and two bags of marshmallows. All interested persons contact MT1(SS) Wright SOON

Trade: One MK 80 Fire Control System for one slingshot and small bag of rocks. See Middleton FTB3(SS)

+++++

For Sale: One uniform formally belonging to QMSN Harrigan
See the AMR1 watch.

+++++

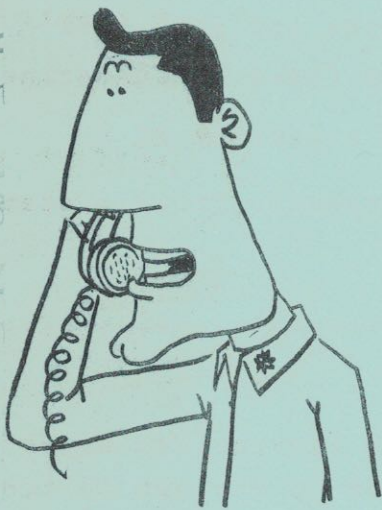

Give Away

Free: Several slightly used and otherwise useless trainees. Anyone interested see MM1(SS) STARK (BUZZARD).

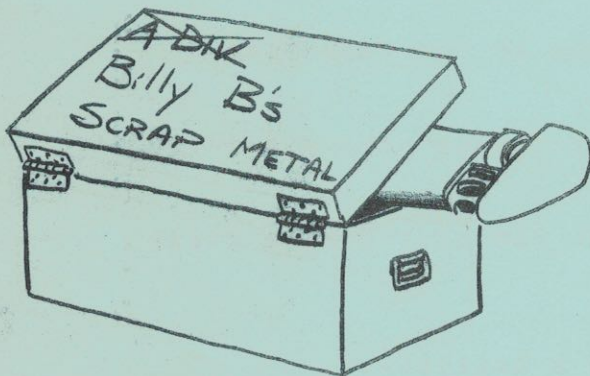

+++++

COUSIN JERRY
WHO?!?

"BAND THIS UP FOR
ME WILL YA WALDO,"

WHAT'S A MONTH
BETWEEN BUDDIES?

(CHUCKLE!)

(CHUCKLE!)

Wanted:

Bright young men of high standards and good moral background for rapidly expanding field of submarine overhaul.

Must have references. Apply at stateroom #2

Sale: Listing of highest quality references. Price quotations available on request.

Send inquires to SHAFT.

+++++

For sale trade or give away:

One worthless professional under instruction watch stander. Has stood three watches on his own in two patrols. See the TM gang.

True or false

Convey has lost a noticable amount of weight this patrol.

T _____ F _____

Gallimore once had hair.

T _____ F _____

Patrol #37 was a nothing but a rumor started by the XO.

T _____ F _____

Gallagher can see in two directions at the same time.

T _____ F _____

Country Joe once worked in a Hippy Comune making snow shoes.

T _____ F _____

Hutchison isn't really tight about Joe making rate first

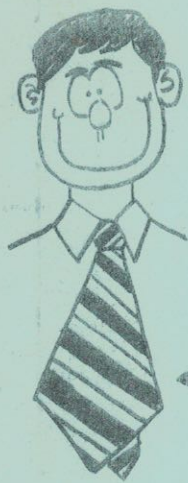

T _____ F _____

The XO plans to give the Porkchop a haircut.

T _____ F _____

The XO is going to be a nice person and cancel the last field day he has planned for Friday.
